**DETAILED ACTION**

***Election/Restrictions***

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

the species of Figure 8;  
the species of Figure 9;  
the species of Figure 10;  
the species of Figure 11;  
the species of Figure 12;  
the species of Figure 13;  
the species of Figure 14;  
and the species of Figure 15.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Currently, there appears to be no generic claim.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

In accordance with the guidance set forth in MPEP section 1850, it has been determined *a posteriori*, i.e., after taking the prior art into consideration, that the features common to all the claims, i.e., **forming a wheel shape, marking the wheel shape with an ID mark, and machining the wheel shape in regions including that of the ID mark to create a finished wheel**, do not constitute "special technical features" since they do not make a "contribution" over the prior art in light of at least **JP 05 004501 A to Makoto**. Specifically note that **Makoto** teaches (constitution, lines 1-10) forming (casting) a wheel shape (W), marking the wheel shape with ID mark (3) and machining the wheel shape in regions including that of the ID mark to create a finished wheel machining (Constitution, lines 8-10).
